Kwik-Wall

PRODUCT

Model 3050 Electric Operable Wall

ARCHITECT

Method Architecture

GENERAL CONTRACTOR

O'Donnell Snider Construction

OWNER

Griffin Partners

LOCATION

Houston, Texas

PHOTOGRAPHY

Griesenbeck

COMPLETION

2024

OBJECTIVE

To provide expanded and multi-functional spaces to Community Health Choice, a local, non-profit healthcare organization helping to create “a healthy life for every Texan.”

BACKGROUND

After over a quarter century of service to the community, it was time to upgrade facilities to better support their mission of “[improving] the health and well-being of underserved Texans by opening doors to healthcare and health-related social services.” The challenge was to maximize the use of the 73,240 SF footprint at the new location. The office and training space needed to be optimized for the variety of services Community Health Choice offers – and with programs spanning the full spectrum of healthcare needs, that was no small undertaking.

SOLUTION

Method Architecture designed the sixth floor to have five (5) motorized operable walls to create up to six training rooms and two different call centers that could be used simultaneously. Each operable wall is 30 feet long and 9 feet high and has a 50 STC sound control rating, ensuring that each space can be used fully and without distraction from neighboring occupants and sessions.

RESULT

Community Health Choice reinvested in the community in such a way that they are better prepared to meet the needs of underserved Texas for decades to come.
